ANVILTEC TRANSFORMATION DIAGNOSTIC

# Find the constraints. Prioritise the value.

A focused, independent review for leaders who need a clear view of what is blocking performance and what should happen next.

## A defined 10-working-day engagement

The diagnostic connects symptoms across process, systems, data, governance and delivery. It converts evidence into executive decisions and a practical first 90 days.

**01** **Executive findings**

A concise view of the constraints, value leakage and decisions that matter.

**02** **Constraint heatmap**

Prioritised issues across people, process, data, technology and governance.

**03** **90-day action plan**

Sequenced actions, accountable owners, measures and dependencies.

**04** **Executive close-out**

A working session to test the evidence and commit immediate decisions.

THE 10-DAY JOURNEY

# Fast, focused and decision-led.

DAYS 1-2

## Align

Confirm outcomes, scope, stakeholders, evidence and the decisions required.

DAYS 3-6

## Discover

Interview leaders, review evidence and test the key constraints.

DAYS 7-8

## Synthesise

Connect causes to value leakage and build the priority heatmap.

DAYS 9-10

## Decide

Present findings and agree owners, measures and first actions.

## What AnvilTec needs

+ Six to ten focused interviews with the sponsor, owners and delivery leads
+ Existing plans, metrics, process material, risks and relevant supplier evidence
+ An executive close-out session with the authority to resolve priorities
+ A clear decision question and honest access to the current position

| | |
|---|---|
| BEST SUITED TO | ERP, PLM or CRM programmes; stalled transformations; engineering and manufacturing SMEs; founder-led businesses preparing to scale or sell. |
| NOT INTENDED AS | Detailed solution design, software selection, implementation assurance or a generic maturity assessment. |

ILLUSTRATIVE OUTPUT

# A decision-ready view, not another long report.

Each priority links the observed constraint to its business impact, evidence, accountable owner and action.

| CONSTRAINT | STATUS | BUSINESS EFFECT | FIRST DECISION |
|---|---|---|---|
| Decision ownership | CRITICAL | Slow cross-functional decisions | Name one outcome owner |
| Process hand-offs | HIGH | Rework and delay | Agree end-to-end measure |
| Management information | HIGH | Conflicting performance views | Define trusted measures |
| Technology dependency | CONTROLLED | Known delivery constraint | Protect critical path |
| Change capacity | CRITICAL | Adoption and readiness risk | Rebalance ownership |

## Begin with a 30-minute conversation

The initial conversation confirms the decision required, organisational scope, access and timing. AnvilTec then provides a concise written scope and fixed fee.
